Summary

Backend & AI engineer with hands-on experience building scalable services and APIs in Python (FastAPI) and Go. I design RESTful and event-driven systems, integrate LLM/RAG inference pipelines and vector databases into production backends, and automate delivery with Docker, Git, and CI/CD.

Self-directed problem-solver — I decompose ambiguous goals, ship a working end-to-end prototype before asking for help, and automate repeat work so shipping is repeatable. Comfortable owning a service from API design through containerized deployment, monitoring, and troubleshooting.

Experience

buho Interactive Entertainment Co., Ltd., Backend Engineer / Software Developer

Taiwan

Mar 2024 – present
2 years 4 months

- Built a **Go** backend service for a live mobile product — player accounts with **OAuth** sign-in, leaderboards, and progress sync — exposing **REST APIs** consumed by client applications.
- Persisted data in **Firestore / Cloud SQL**, containerized services with **Docker**, and deployed to **Google Cloud Platform (Cloud Run / GKE)**.
- Designed and operated **CI/CD pipelines** (Fastlane + Git + a Discord bot) that cut release-prep time by ~70% and enabled remote-triggered builds.
- Participated in code reviews and built production infrastructure that keeps teams shipping fast.

Independent Studio, Founder / Full-Stack Developer

Taiwan

Sept 2022 – Mar 2024
1 year 7 months

- Owned products end-to-end — backend services, APIs, data, and client integration — independently building, releasing, and maintaining commercial software.
- Built an AI-powered application on **Google Cloud Platform** with a **TypeScript** backend and **Flutter** client, iterating from live user feedback.

NPC – NTUT Programming Club, Chief of Operations

Taipei, Taiwan

2019 – 2022
3 years

- Organized technical events including a Machine Learning course delivered in partnership with **Google**.
- Coordinated cross-disciplinary engineering collaboration among members.

Projects

A Slime — Self-Hosted AI Agent (RAG + LLM APIs)

2026

- **FastAPI** backend serving a tool-using AI agent: document ingestion pipeline, **RAG** over a **Chroma vector database** (LangChain), and **WebSocket** chat.
- Multi-provider **LLM inference routing** across Google Gemini, Ollama, and NVIDIA NIM — abstracting model APIs behind a single backend interface.
- Backend-integrated tools (calendar, search) plus a **Vue 3 / TypeScript** web client and an optional Tauri desktop shell.
- Tech: Python, FastAPI, LangChain, Chroma, WebSocket, Vue.js, TypeScript

Game Services Backend (Go on GCP)

2024 – present

- **Go** REST API for accounts, leaderboards, and game data with **OAuth** authentication; **Docker**-containerized and deployed to **Cloud Run / GKE**.
- Durable persistence in **Firestore / Cloud SQL**, supporting authenticated players and progress sync across releases.
- Tech: Go, GCP, Cloud Run, OAuth, Firestore, Docker

CI/CD Automation Pipeline

2025

- End-to-end build/test/deploy automation using **Fastlane**, **GitHub Actions**, and a custom **Discord** bot for remote control.
- Reduced release-prep time by ~70% and improved iteration speed across the team.
- Tech: Fastlane, GitHub Actions, Git, Docker, Discord

PHP Quiz / Email Service

2026

- Multi-step quiz service with client-side scoring, i18n, Google Forms capture, and an HTML email pipeline (Resend / Apps Script).
- Automated deployment via **GitHub Actions** to GitHub Pages.
- Tech: PHP, JavaScript, Resend, GitHub Actions

Education

BS **National Taipei University of Technology**, Computer Science

Taipei, Taiwan
2018 – 2022

Skills

Backend: Python (FastAPI), Go, Node.js, RESTful API design, OAuth2/JWT, WebSocket, microservices, event-driven systems

AI / ML: LLM inference APIs, RAG, vector databases (Chroma), LangChain, NLP pipelines, multi-provider model routing

Databases: PostgreSQL, MySQL, MongoDB, Firestore, Cloud SQL, query optimization, caching

DevOps / Cloud: Docker, CI/CD, Git, GitHub Actions, Fastlane, Google Cloud Platform, Cloud Run, GKE (Kubernetes)

Frontend: TypeScript, JavaScript, Vue.js, React, Next.js

Languages: Mandarin (Native), English (Professional), Japanese (Learning)
