Summary

Engineer who takes **full ownership** of complex, **client-facing** projects end-to-end, from technical architecture and product features to **full-scale API integrations**. Shipped a playable web experience for client Devsisters as chief programmer and the project-manager point of contact, working directly with the client from requirements through handover.

Proficient in **Python** and full-stack web development (React / Next.js, Go, FastAPI) with a deep grasp of **software architecture and APIs** recently built an MCP server and API endpoints so an AI agent can operate an internal console. Skilled at **summarizing complex technical knowledge** for any audience and reasoning toward the optimal solution. **Mandarin and English**.

Experience

buho Interactive Entertainment Co., Ltd., Software Engineer (Full-Stack)

Taiwan
Mar 2024 – present

- **Client delivery**
 - Shipped a playable web experience for **client Devsisters** (CookieRun / Brave IP): full-stack WebGL, responsive on mobile and desktop, on GCP, as chief programmer and the **project-manager point of contact**, driving the project from zero to a launched product and **direct client handover**.
- **Internal console & web UI**
 - Own the company's internal live-ops console end-to-end: a Next.js / React (TypeScript) front end with Firestore-backed **API routes** on GCP for game-data uploads, member management, and ops tooling.
 - Exposed the console through an **MCP server and API endpoints** so an AI agent can operate it, lifting level-design output **from ~10 to 1000+ levels per day**.
 - Automated the dev-to-deploy pipeline with GitHub Actions → GCP, turning a manual ~30-minute release into a hands-off push-to-deploy.
- **Full-stack & AI delivery**
 - Built an internal LLM agent in **Python** (FastAPI, LangChain, RAG) **integrating external LLM provider APIs**, with a Vue chat UI in daily use by the 6-person team and hardened by a pytest suite of 40+ deterministic contracts, **saving the team ~20 hours/week**.
 - Built a Go game-services backend, OAuth accounts, leaderboards, and progress sync via **REST APIs**, Docker-containerized on Cloud Run / GKE with Firestore / Cloud SQL, serving **10K+ daily active users**.
 - Built a chat-ops Discord bot that runs git operations and the build-and-release pipeline from a single command, replacing a manual multi-step process.

Projects

Personal Portfolio (Next.js)

2025 – present
casualattitude.site

- Built with Next.js + TypeScript + Tailwind CSS and Framer Motion: multilingual i18n (EN / JA / TW), dark mode, and static deployment to a custom domain.
- Designed a reusable component system with responsive layouts across all breakpoints.

TAT: NTUT Campus Life App

2020 – 2022
[App Store](#)

- **Led a 6-person team** to build NTUT's campus app in Flutter, now a daily tool on a 10K+-student campus.
- Drove the app to **10K+ downloads** at 4.3★, open-sourced it, and kept it running through repeated portal and authentication changes.

Education

BS National Taipei University of Technology, Computer Science

Taipei, Taiwan
2018 – 2022

- Extracurricular President, NPC Programming Club
 - Hosted 12+ computer-science knowledge-sharing workshops, run weekly through each semester, **translating complex technical material for mixed-skill audiences**.
 - Brought 3 classes of Google's [Machine Learning Crash Course](#) to campus.

Skills

Backend & APIs: Python (FastAPI), Go, Node.js, REST APIs, API integration, OAuth2/JWT, WebSocket, software architecture

AI / LLM: LLM provider APIs, RAG, LangChain, vector databases, agents / tool use, MCP server

Cloud & DevOps: GCP (Cloud Run, GKE), Docker, CI/CD (GitHub Actions), Git

Front-End: TypeScript, JavaScript, React, Next.js, Vue 3, Tailwind CSS, WebGL, responsive design (RWD), i18n

Testing: unit & integration testing, pytest

Also: Flutter & Swift (mobile), Figma

Spoken Languages: Mandarin, English
